

MEDICAL EDUCATION PROGRAMS

THE Cleveland Clinic Educational Foundation was established in 1935 to carry out the medical education programs of the Cleveland Clinic. For twenty-seven years it was known as The Frank E. Bunts Educational Institute, and in 1962, to achieve closer identity with The Cleveland Clinic Foundation, the present name was adopted. The articles of incorporation state that the purposes are: “. . . to establish, maintain and conduct an institution of learning for promoting education and giving instruction in the art, science and practice of medicine, surgery, anatomy, hygiene and allied or kindred sciences and subjects. . . .”

To implement its purposes The Cleveland Clinic Educational Foundation is actively conducting four basic programs: (1) a graduate training program for physicians; (2) an intern training program; (3) a program of continuation courses for practicing physicians; (4) a training program for high school graduates, in x-ray technology and, for college seniors, in medical technology.

Program (1) offers training in the specialty fields, with a view toward certification of the physicians by the American Specialty Boards. Fellowships, numbering one hundred and seventy, are available both to men and to women in twenty specialties of medicine. Program (2) offers three training courses for interns—rotating, mixed medical, and mixed surgical internships are available. The training is given at the Cleveland Clinic and the Cleveland Clinic Hospital by the staff physicians of the Cleveland Clinic, and is coordinated and is administered by the Director of Education, the Intern Committee, and the Faculty Board. Program (3) offers from six to ten postgraduate courses annually for one or two days each, in the various medical fields; these courses are open to any licensed physician. Program (4) offers training to students with a view toward their certification by the American Registry of X-Ray Technicians, or the Registry of Medical Technologists of the American Society of Clinical Pathologists.

The Cleveland Clinic Foundation is now constructing on East 90th Street a seven-story building to be devoted solely to medical education, made possible through the generous bequest of the late Martha Holden Jennings. Completion is scheduled for the summer of 1964. The entire building will be air-conditioned. A paneled lobby on the main floor will have a corridor that leads directly to the lobby of the Cleveland Clinic Hospital. The 272-seat auditorium will have the latest visual communications equipment, and will be accessible from the main lobby and also from a second-floor lobby of the Education Building. Three large seminar rooms will be located on the main floor, and four seminar rooms will be on the second floor. A kitchen will also be on this floor for catered meals for educational functions. On the third floor will be located all of the Educational Foundation offices, offices for physicians engaged in special educational projects, as well as offices for members of the emeritus staff. A faculty lounge will feature historical records and mementos of the Foundation. The fourth floor will house the Educa-

tional Foundation Medical Library and the Editorial Department. The top three floors will be devoted exclusively to the housing of the resident staff, with a total of sixty-three single-unit study-bedrooms. Each of these floors will have recreational facilities. A passageway on the fifth floor will connect the Education Building with the hospital.

Inquiries concerning the medical education programs of The Cleveland Clinic Educational Foundation may be sent to the Director of Education.

WALTER J. ZEITER, M.D.
