CURRENT DRUG THERAPY

DONALD G. VIDT, EDITOR

Methotrexate in rheumatoid arthritis: 351
when NSAIDs fail

With diligent monitoring, low-dose methotrexate is effective for treating selected patients with rheumatoid arthritis, and it is safer than previously thought.

J.A. FLYNN AND D.B. HELLMAN

CLINICAL REVIEW

Acute dissection of the aorta: 360
options for diagnostic imaging

Although medical therapy should be started as soon as dissection of the aorta is suspected, new imaging methods help confirm the diagnosis.

SYMPOSIUM: THE INTERNIST AND PERIOPERATIVE CARE

INTRODUCTION

The internist as consultant 366

Ways internists can improve their effectiveness in evaluating patients, managing surgical complications and communicating with referring physicians.

MEDICAL GRAND ROUNDS

WILLIAM S. WILKE, EDITOR

Deep venous thrombosis: 368
low-molecular-weight heparins in perioperative prophylaxis

Although low-molecular weight heparins have theoretical advantages over standard heparin in preventing DVT, the differences in outcome have not been dramatic. The important issue is to give some form of prophylactic therapy.

INTERNAL MEDICINE BOARD REVIEW

DAVID L. LONGWORTH AND JAMES K. STOLLER, Editors

Postoperative confusion in a 42-year-old man
Recognizing the cause of postoperative confusion and treating the problem: a self-test
J.H. ISAACSON

A 55-year-old man with chronic liver disease and coagulation abnormalities
Assessing the effect of cirrhosis on coagulation and preventing perioperative bleeding: a self-test
C. ANDERSON

CLINICAL REVIEWS

Preoperative screening: What tests are necessary?
Ordering preoperative tests is as easy as checking a form. But what tests are worthwhile for which patients?
T. JONES AND J.H. ISAACSON

The preoperative bleeding time test: assessing its clinical usefulness
Because of the bleeding time test’s low value in predicting perioperative bleeding, it should be abandoned as a routine screening test.
A.S. GEWIRITZ, K. KOTTKE-MARCHANT, AND M.L. MILLER

Perioperative care of the elderly patient: special considerations
For the elderly, surgical risk factors such as underlying disease or the nature of the surgery are more important than age alone. A preoperative assessment can help define risk.
D.L. MILLER

Evaluating cardiac risk in noncardiac surgery patients
The history, examination, and resting EKG are the cornerstone of cardiac risk assessment, but new techniques are available for questionable cases.
D.L. BRONSON, A. K. HALPERIN, AND T.H. MARWICK

Postoperative pulmonary complications: risk assessment, prevention, and treatment
Preoperative pulmonary function testing is needed only in high-risk patients; proper management can decrease the risk.
S.P. HAYDEN, M.E. MAYER, AND J.K. STOLLER
