MEDICAL GRAND ROUNDS

WILLIAM S. WILKE, *Editor*

Smoking and the complications of diabetes mellitus 373

Even though persons with diabetes have more to gain from quitting smoking than those without diabetes, the prevalence of smoking in the diabetic population is surprisingly high.

S.K. REDDY

Eradication of polio and guinea worm disease 375

Two ancient scourges of mankind will soon follow smallpox into extinction if World Health Organization campaigns are successful.

REVIEWS

Peptic ulcer bleeding: perspectives on some common dilemmas 381

Not all patients with peptic ulcer bleeding need endoscopic therapy, intensive care, or even hospital admission; clinical signs and endoscopic findings determine the need for various levels of care.

C.P. CHOUDARI

Eating disorders in adolescents and young adults: What's a primary care clinician to do? 387

Eating disorders can be readily detected by recognizing certain "red flags" and by asking appropriate questions. Primary care clinicians play a key role in detecting and managing eating disorders.

E.S. ROME

Changing diagnostic and treatment strategies for chronic sinusitis 396

Considerable debate continues over the nature and treatment of chronic sinusitis. Anaerobic bacteria and antibiotic-resistant organisms are complicating treatment.

CURRENT DRUG THERAPY

DONALD G. VIDT, *Editor*

New antidepressants: more options for tailoring treatment 406

The newer antidepressants cause fewer, less severe side effects than older drugs. Differing mechanisms of action of these new agents offer additional options for tailoring treatment to individual patients.
