DECEMBER 2002

TABLE OF CONTENTS

FROM THE EDITOR

Who is conducting the deadly quartet? 927

The metabolic syndrome warrants aggressive intervention and prevention, even if we cannot explain it yet.

B.F. MANDELL

REVIEW

Emphysema in nonsmokers: Alpha 1-antitrypsin deficiency and other causes 928

The 10% of patients with emphysema who never smoked deserve a workup for its less common causes, including genetic risk modifiers and occupational exposures.

P. LEE, T.R. GILDEA, AND J.K. STOLLER

REVIEW

Update on the diagnosis and treatment of human papillomavirus infection 948

Genotyping can distinguish viral subtypes that pose a high risk for cancer, but current therapies do not reliably eradicate the virus, and warts and neoplasia often recur after treatment.

K.M. ZANOTTI AND J. BELINSON

INTERPRETING KEY TRIALS

The HIP trial Risedronate prevents hip fractures, but who should get therapy? 964

Patients should be selected for bisphosphonate therapy on the basis of low bone density, not age.

C.L. DEAL

REVIEW

Gallbladder disease: An update on diagnosis and treatment 977

Current diagnostic techniques and treatments offer results equal to or better than those of earlier methods, are less invasive, and allow patients to recover faster.

D.P. VOGT

REVIEW

A truly deadly quartet: Obesity, hypertension, hypertriglyceridemia, and hyperinsulinemia 985

The best available treatment is to control one's weight, exercise regularly, stop smoking, and eat a healthy diet.

V. NAMBI, B.J. HOOGWERF, AND D.L. SPRECHER

EDITORIAL

The metabolic syndrome: A tug-of-war with no winner 990

Even before beta cells fail, the deadly quartet is quietly rehearsing.

D.J. BROTMAN AND J.P. GIROD

MEDICAL GRAND ROUNDS

HIV update 2002: Delaying treatment to curb rising resistance 995

"Treat early, treat hard" is changing to "treat a little later, treat hard."

W. ARMSTRONG, L. CALABRESE, AND A. TAEGE

1-MINUTE CONSULT

Brief answers to specific clinical questions

Which children and adults should receive the chickenpox vaccine? 1000

It should be given to all seronegative children and adults in whom it is not otherwise contraindicated.

C. SABELLA
