**FROM THE EDITOR** ........................................................................................................... 830

Influenza: It’s right to bare arms

As busy as we are, it is worth spending extra time to aggressively promote immunization to our patients, our staff, and ourselves.

B.F. Mandell

**COMMENTARY** ................................................................................................................ 832

A medical center is not a hospital: Reflections of a department chair still in the game

Dr. Thomas Lansdale’s commentary in the September issue resonated with many physicians because he so eloquently captured the increasing frustration that many physicians feel.

D.L. Longworth

**THE CLINICAL PICTURE** ................................................................................................. 847

Black hairy tongue

A 71-year-old man presents for evaluation of an asymptomatic black discoloration of the tongue. What is the most likely diagnosis?

S. Vanó-Galván and P. Jaén

**REVIEW** ............................................................................................................................ 849

Carcinoid tumors: What should increase our suspicion?

Patients often present with vague, nonspecific symptoms, and unless the primary care physician suspects that the patient has a carcinoid tumor, the appropriate testing is seldom ordered.

G. Aggarwal, K. Obideen, and M. Wehbi

**REVIEW** ............................................................................................................................ 856

Parkinson disease: Not just a movement disorder

Nonmotor symptoms—sensory, autonomic, and behavioral—are common and important to recognize, as they can lead to even more serious complications and impair quality of life.

M. Pandya, C.S. Kubu, and M.L. Giroux

REVIEW

2008–2009 Influenza update: 865
A better vaccine match
Last flu season, some people may have lost their faith
in flu shots. In the 2008–2009 flu season,
we hope to do better.
S.B. MOSSAD

REVIEW

Bisphosphonates and osteonecrosis of the jaw: 871
Innocent association or significant risk?
A cause-and-effect relationship has not been established,
and most of the reported cases have been in patients with
 canc er who were receiving much higher doses than those
used in osteoporosis or Paget disease of the bone.
J.J. CAREY AND L. PALOMO

REVIEW

Hepatitis B virus infection: 881
Understanding its epidemiology,
course, and diagnosis
Internists should be aware of the natural history
of hepatitis B virus infection, a vital prerequisite
to assessing disease severity and determining the
need for antiviral therapy.
H.M. ELGOUHARI, T.I. ABU-RAJAB TAMIMI, AND W.D. CAREY
