TABLE OF CONTENTS

FROM THE EDITOR

'Blood will have blood' 327

Why should more patients die when hemoglobin levels are normalized with erythropoiesis-stimulating agents? It could be another case of "messing with Mother Nature."

B.F. MANDELL

REVIEW

Perioperative management of bariatric surgery patients: Focus on metabolic bone disease 333

Obese people are at risk of low bone mass to begin with, and bariatric surgery increases the risk. Primary care physicians play an important role in their preventive care.

S.E. WILLIAMS, K. COOPER, B. RICHMOND, AND P. SCHAUER

THE CLINICAL PICTURE

Acute facial purpura in an 82-year-old woman with a respiratory tract infection 352

The lesions appeared suddenly and spontaneously and were not associated with trauma. What is the most likely diagnosis?

S. VAÑÓ-GALVÁN AND E. MUÑOZ-ZATO

CURRENT DRUG THERAPY

Anemia of chronic kidney disease: When normalcy becomes undesirable 353

Several recent studies indicate that raising hemoglobin levels to the normal range with erythropoiesis-stimulating agents can be too much of a good thing, and the US Food and Drug Administration has issued a warning on the use of these drugs in renal disease.

S.G. DEMIRJIAN AND S. NURKO

EDITORIAL

How safe are erythropoiesis-stimulating agents? 359

The year 2007 was a rough one for these agents, and the story is far from over.

A.E. LICHTIN

CARDIOVASCULAR BOARD REVIEW

An elderly woman with shortness of breath 362

Her dyspnea started about 6 months ago and has recently worsened. What is the cause?

E.S.H. KIM, R. KRASUSKI, AND H.L. GORNIK

MEDICAL GRAND ROUNDS

Thrombotic thrombocytopenic purpura: 2008 update 369

This is one of the few hematologic emergencies. Untreated, most patients die, but prompt treatment allows most patients not only to survive but to recover.

M.A. CROWTHER AND J.N. GEORGE

IMAGING IN PRACTICE

The painful knee: Choosing the right imaging test 377

The initial evaluation of acute knee pain should include plain radiography, but computed tomography is the test of choice for fractures, and magnetic resonance imaging is useful for evaluating the cartilage, menisci, and ligaments.

M. KOPLAS, J. SCHILS, AND M. SUNDARAM

INTERPRETING KEY TRIALS

The Women's Health Initiative: Implications for clinicians 385

Postmenopausal women who were randomized to follow a diet low in fat and high in fruits, vegetables, and grains did not have significantly lower rates of breast cancer, colon cancer, or cardiovascular disease. However, a long-term follow-up study is under way. What have we learned, and what are the implications for clinical practice?

L. VAN HORN AND J.E. MANSON

DEPARTMENTS

Letters to the Editor 328

Hematuria evaluation (March 2008); methicillin-resistant *Staphylococcus aureus* (March 2008).

CME Calendar 350

CME Self-test Online 391

UPCOMING FEATURES

- Guidelines for colorectal cancer screening
- Noninvasive positive pressure ventilation for acute exacerbations of COPD
- Take charge of your e-mail!
- Back pain: A possible presentation of cancer, infection, or fracture
- Exercise testing for diagnosis and prognosis
- Movement disorder emergencies in elderly patients: Often serious, iatrogenic
- Monitoring lung problems in childhood cancer survivors
