OCTOBER 2009

TABLE OF CONTENTS

FROM THE EDITOR ................................................................. No pig in a poke  561

As we approach the 2009 flu season, “swine flu” presents a real and distinct concern for patients, clinicians, and public health officials.

B.F. MANDELL

CARDIOVASCULAR BOARD REVIEW ........................................... A middle-aged man with progressive fatigue  564

He has been taking good care of himself, but 1 year ago his ejection fraction was 60% and now it is 35%. He also has a new left bundle branch block. What is the cause?

A.M. McDIVIT and A.T. ASKARI

THE CLINICAL PICTURE ............................................................... Ulcerative leg nodules in a transplant recipient  575

Three weeks after undergoing bilateral lung transplantation, the patient has developed new nodules on his leg. What is the cause?

A-P CHUA, S.D. BILLINGS, M.M. BUDEV, and A.C. MEHTA

MEDICAL GRAND ROUNDS ....................................................... Update on 2009 pandemic influenza A (H1N1) virus  577

The approaches to vaccination, prophylaxis, and treatment will be more complex this year. Unsuspected cases of influenza in hospitalized patients or health care workers working with influenza pose the greatest threat for transmission of influenza within the hospital. Health care workers need to stay home when sick.

S.M. GORDON

REVIEW .................................................................................. Nephrolithiasis: Treatment, causes, and prevention  583

Kidney stones are not all the same, and neither are their treatment, causes, or prevention. Paradoxically, calcium restriction is not warranted for patients who have calcium stones, and may even be harmful.

P.M. HALL

**REVIEW**

**Less-invasive ways to remove stones from the kidneys and ureters**

Lithotripsy, ureteroscopy, and percutaneous nephrolithotomy all have advantages and disadvantages in different situations. But not all patients with stones need intervention.

M.K. SAMPLASKI, B.H. IRWIN, AND M. DESAI

**REVIEW**

**Recognizing and treating cutaneous signs of liver disease**

If we can recognize these manifestations early, we will be better able to promptly diagnose and treat the underlying liver disease as well as the skin lesions.

R. HAZIN, T.I. ABU-RAJAB TAMIMI, J.Y. ABUZETUN, AND N.N. ZEIN

**REVIEW**

**Autoimmune pancreatitis: A mimic of pancreatic cancer**

The accurate and timely diagnosis of this benign disease may preempt the misdiagnosis of cancer and decrease the number of unnecessary pancreatic resections.

R. LAW, M. BRONNER, D. VOGT, AND T. STEVENS

**UPCOMING FEATURES**

- Better ways to assess high blood pressure
- An algorithm for managing warfarin resistance
- Therapies to shorten postoperative ileus
- Managing diabetes in dialysis patients
- Managing fragility fractures in kidney patients
- Food allergies and eosinophilic esophagitis
- Is the combination of ACE and ARB better than either agent alone?
- Patient selection for dual antiplatelet therapy

**CME calendar**

To receive CME credit, read the selected articles in this issue and then go online to take the test. It should take about 1 hour and 30 minutes to complete this activity.

Release date: October 1, 2009.
Expiration date: September 30, 2010
