Anticoagulants and pregnancy: When are they safe?
Thrombotic risk is higher in pregnancy, and some women need anticoagulant therapy. Unfractionated heparin and low-molecular-weight heparins are effective and safe, with caveats.

REVIEW

Cancer and clots: All cases of venous thromboembolism are not treated the same

Idiopathic venous thromboembolism can be the first sign of cancer, although how extensively one should search for cancer in these cases is not clear.

Lupus update: Perspective and clinical pearls

Patients with systemic lupus erythematosus have a markedly better survival rate today, but they face a greater risk of cancer, cardiovascular disease, and osteoporosis at early ages.
