DECEMBER 2010

Table of Contents

From the Editor ................................................................. 840
Why is fixing the plumbing so difficult?
For carotid stenosis, a catheter-based procedure would seem safer than endarterectomy, but reality is not always so simple.
B.F. Mandell

The Clinical Picture ......................................................... 848
Cornflakes-like scales on the ankles and feet
An 81-year-old woman presents with slowly growing, asymptomatic lesions on both feet and ankles. Which test should be ordered to establish the diagnosis?
C. Gomez-Fernandez, B.C. Verrier, L.S. Canalejas, R.M.A. de Celada, and P.H. Pinto

Current Drug Therapy ...................................................... 859
MAO inhibitors: Risks, benefits, and lore
Monoamine oxidase inhibitors were the first antidepressants introduced. Interest in their use is reviving.
M. Wimbiscus, O. Kostenko, and D. Malone

1-Minute Consult ............................................................. 884
Should alpha-blockers ever be used as antihypertensive drugs?
They are not first-line drugs, but they can be second-line or third-line add-on drugs if blood pressure is not under control.
G. Rossitto, G. Kamath, and F.H. Messerli

Interpreting Key Trials ...................................................... 892
Understanding the CREST results: Carotid stenting vs surgery: Parsing the risk of stroke and MI
For patients with carotid artery stenosis, percutaneous intervention with stenting is as good as surgery—with some qualifications.
O. Aksoy, S.R. Kapadia, C. Baizer, W.M. Clark, and M.H. Shishehbor

MEDICAL GRAND ROUNDS

Vitamin D and the heart: 903
Why we need large-scale clinical trials
Despite enthusiasm for vitamin D, no large-scale primary prevention trial has used cardiovascular disease or cancer as a prespecified primary outcome.

J.E. MANSON

REVIEW

The homocysteine hypothesis: 911
Still relevant to the prevention and treatment of cardiovascular disease?
Elevated homocysteine is a risk factor, and vitamins lower homocysteine levels. But does vitamin supplementation prevent cardiovascular events?

J.M. ABRAHAM AND L. CHO

REVIEW

Managing gout: 919
How is it different in patients with chronic kidney disease?
The goals are the same, but the choice and dosage of drugs may need to be modified.

H. EL-ZAWAWY AND B.F. MANDELL

DEPARTMENTS

Letters to the Editor 843
Readers comment on nutritional supplementation after bariatric surgery (July 2010) and on glucocorticoid-induced osteoporosis (August 2010).

CME Calendar 856

Index to Volume 77 929

Directions for taking CME tests online 933
To receive CME credit, read any or all of the CME-certified articles in this issue (those that carry the CME logo), then go to www.ccjm.org to take the test for the article or articles you select. It should take up to 1 hour to complete the activity for each article.
Release date: December 1, 2010
Expiration date: November 30, 2011

UPCOMING FEATURES

Goal-directed BP therapy: Benefits and pitfalls

Proton pump inhibitor side effects and interactions: Much ado about nothing?

Managing bloodstream infections in patients with central venous catheters

Anorexia nervosa’s effects on bone health

It’s time to treat HIV like a normal disease

Do patients with artificial joints need antibiotics before dental work?

Managing symptoms: An important part of cancer care

Interpreting the estimated GFR in primary care
