## Table of Contents

### From the Editor

*Why is fixing the plumbing so difficult?*

For carotid stenosis, a catheter-based procedure would seem safer than endarterectomy, but reality is not always so simple.

**B.F. Mandell**

### The Clinical Picture

*Cornflake-like scales on the ankles and feet*

An 81-year-old woman presents with slowly growing, asymptomatic lesions on both feet and ankles. Which test should be ordered to establish the diagnosis?

**C. Gómez-Fernández, B.C. Verrier, L.S. Canalejas, R.M.A. de Celada, and P.H. Pinto**

### Current Drug Therapy

*Monoamine oxidase inhibitors: Risks, benefits, and lore*

Monoamine oxidase inhibitors were the first antidepressants introduced. Interest in their use is reviving.

**M. Wimbiscus, O. Kostenko, and D. Malone**

### 1-Minute Consult

*Should alpha-blockers ever be used as antihypertensive drugs?*

They are not first-line drugs, but they can be second-line or third-line add-on drugs if blood pressure is not under control.

**G. Rossitto, G. Kamath, and F.H. Messerli**

### Interpreting Key Trials

*Understanding the CREST results. Carotid stenting vs surgery: Parsing the risk of stroke and MI*

For patients with carotid artery stenosis, percutaneous intervention with stenting is as good as surgery—with some qualifications.

**O. Aksoy, S.R. Kapadia, C. Bajzer, W.M. Clark, and M.H. Shishehbor**

MEDICAL GRAND ROUNDS.................................

Vitamin D and the heart: 903  
Why we need large-scale clinical trials
Despite enthusiasm for vitamin D, no large-scale primary prevention trial has used cardiovascular disease or cancer as a prespecified primary outcome.

J.E. MANSON

REVIEW ..........................................................

The homocysteine hypothesis: 911  
Still relevant to the prevention and treatment of cardiovascular disease?
Elevated homocysteine is a risk factor, and vitamins lower homocysteine levels. But does vitamin supplementation prevent cardiovascular events?

J.M. ABRAHAM AND L. CHO

DEPARTMENTS ..............................................

Letters to the Editor 843  
Readers comment on nutritional supplementation after bariatric surgery (July 2010) and on glucocorticoid-induced osteoporosis (August 2010).
