DECEMBER 2010

TABLE OF CONTENTS

FROM THE EDITOR

Why is fixing the plumbing so difficult? 840
For carotid stenosis, a catheter-based procedure would seem safer than endarterectomy, but reality is not always so simple.
B.F. MANDELL

THE CLINICAL PICTURE

Cornflake-like scales on the ankles and feet 848
An 81-year-old woman presents with slowly growing, asymptomatic lesions on both feet and ankles. Which test should be ordered to establish the diagnosis?
C. GÓMEZ-FERNÁNDEZ, B.C. VERRIER, L.S. CANALEJAS, R.M.A. DE CELADA, AND P.H. PINTO

CURRENT DRUG THERAPY

MAO inhibitors: 859
Risks, benefits, and lore
Monoamine oxidase inhibitors were the first antidepressants introduced. Interest in their use is reviving.
M. WIMBISCUS, O. KOSTENKO, AND D. MALONE

1-MINUTE CONSULT

Should alpha-blockers ever be used as antihypertensive drugs? 884
They are not first-line drugs, but they can be second-line or third-line add-on drugs if blood pressure is not under control.
G. ROSSITTO, G. KAMATH, AND F.H. MESSERLI

INTERPRETING KEY TRIALS

Understanding the CREST results. 892
Carotid stenting vs surgery: Parsing the risk of stroke and MI
For patients with carotid artery stenosis, percutaneous intervention with stenting is as good as surgery—with some qualifications.
O. AKSOY, S.R. KAPADIA, C. BAJZER, W.M. CLARK, AND M.H. SHISHEHBOR

MEDICAL GRAND ROUNDS

Vitamin D and the heart: Why we need large-scale clinical trials
Despite enthusiasm for vitamin D, no large-scale primary prevention trial has used cardiovascular disease or cancer as a prespecified primary outcome.

J.E. MANSON

REVIEW

The homocysteine hypothesis: Still relevant to the prevention and treatment of cardiovascular disease?
Elevated homocysteine is a risk factor, and vitamins lower homocysteine levels. But does vitamin supplementation prevent cardiovascular events?

J.M. ABRAHAM AND L. CHO

Managing gout: How is it different in patients with chronic kidney disease?
The goals are the same, but the choice and dosage of drugs may need to be modified.

H. EL-ZAWAWY AND B.F. MANDELL

UPCOMING FEATURES

■ Goal-directed BP therapy: Benefits and pitfalls

■ Proton pump inhibitor side effects and interactions: Much ado about nothing?

■ Managing bloodstream infections in patients with central venous catheters

■ Anorexia nervosa’s effects on bone health

■ It’s time to treat HIV like a normal disease

■ Do patients with artificial joints need antibiotics before dental work?

■ Managing symptoms: An important part of cancer care

■ Interpreting the estimated GFR in primary care
