FROM THE EDITOR ................................................................. 71
Important changes to our CME program
Starting this month, readers can earn CME credit on a per-article basis. Each article that bears the CME logo is a separate CME test, each worth 1 credit.

B.F. MANDELL

COMMENTARY ................................................................. 76

Sorting through the recent controversies
Despite the new US recommendations, we continue to recommend yearly mammograms for most women, starting at age 40.

H.C.F. MOORE, G.T. BUDD, A. SIKON, A. RIM, M. CHELLMAN-JEFFERS, AND J. CROWE

THE CLINICAL PICTURE .................................................. 90

Thick skin on the back
An obese woman with long-standing uncontrolled type 2 diabetes mellitus presents with indurated thickening of the skin on her back. What is the diagnosis?

G. ASHRITH AND R. ARORA

THE CLINICAL PICTURE .................................................. 96

Calcified cysts in the upper abdomen
A plain chest radiograph reveals multiple calcified cysts in the upper abdomen of a man who has been on dialysis for 15 years. What is the most plausible diagnosis?

M.-J. TSAI AND H.-C. CHEN

MEDICAL GRAND ROUNDS .............................................. 101

Controversies in non-ST-elevation acute coronary syndromes and percutaneous coronary interventions
An update on recent studies of treatment strategies, including stenting and antplatelet agents.

D.L. BHATT

CURRENT DRUG THERAPY ............................................... 113

Omeprazole and clopidogrel: Should clinicians be worried?
The FDA has warned of a possible interaction between omeprazole (Prilosec) and clopidogrel (Plavix), but for the time being we should not change the way we manage patients.

J.P. DEPTA AND D.L. BHATT

IM BOARD REVIEW

A 40-year-old man with spells of generalized weakness and paresthesias

A 40-year-old man who works as a roofer has begun to experience episodes of generalized weakness, perioral numbness, and diffuse paresthesias. What is the cause?

D.L. NGUYEN, S. KHAMBATTA, J.B. EICKSTAEDT, AND D.R. NELSON

PREVENTING VENOUS THROMBOEMBOLISM IN LONG-TERM CARE RESIDENTS: CAUTIOUS ADVICE BASED ON LIMITED DATA

More research is needed to ascertain which long-term care residents would benefit most from anticoagulant prophylaxis. In the absence of evidence-based guidelines, we advocate a selective approach.

M. PAI AND J.D. DOUKETIS

MANAGING ACUTE UPPER GI BLEEDING, PREVENTING RECURRENCES

Acute upper gastrointestinal bleeding is common and potentially life-threatening. It needs prompt assessment and aggressive medical management.

M. ALBELDAWI, M.A. QADEER, AND J.J. VARGO

UPCOMING FEATURES

- Stenting atherosclerotic renal arteries: Time to be less aggressive
- How to evaluate mildly elevated liver enzymes
- Treating silent GERD does not help asthma
- The JUPITER trial: Should we give statins to prevent venous thromboembolism?
- MAO inhibitors: A second look
- Reducing the health risks of foreign travel
- Measles: Not just a childhood rash
- Should patients with mild asthma use inhaled steroids?
