Interpreting the JUPITER trial: 191
Statins can prevent VTE, but more study is needed

The incidence of venous thromboembolism in people taking rosuvastatin (Crestor) 20 mg/day was about half that in people taking placebo. This was a relatively healthy group of people. Taking rosuvastatin (Crestor) 20 mg/day was about half as effective as expected. Statins can prevent VTE, but more study is needed to make treatment decisions based on their results.

A. PEREZ and J.R. BARTHOLOMEW

**REVIEW**

When and how to evaluate mildly elevated liver enzymes in apparently healthy patients

Not all asymptomatic people with a mildly elevated liver enzyme value need an extensive evaluation, which can be costly, anxiety-provoking, and risky.

G. ARAGON AND Z.M. YOUNOSSI

**THE CLINICAL PICTURE**

Palpable purpura

A healthy 47-year-old woman presents with a 3-day history of widespread asymptomatic lesions in the extremities, fever, arthralgias, and mild abdominal pain. What is the diagnosis?
