HIV: Just another chronic disease 489

Did we ever expect a time when HIV would be viewed as a chronic disease, with patients warranting screening for coronary artery disease in order to decrease long-term coronary complications?

B.F. Mandell

1-MINUTE CONSULT ..........................................................................

Can patients with COPD or asthma 498 take a beta-blocker?

Yes, if they really need one. We would choose a cardioselective agent.

E.V. Navas and D.O. Taylor

1-MINUTE CONSULT ..........................................................................

Do incretin drugs for type 2 diabetes 503 increase the risk of acute pancreatitis?

Probably not. The risk is higher in type 2 diabetes regardless of treatment.

L. Olansky

THE CLINICAL PICTURE ......................................................................

Painful red nodule on the right hand 512

A healthy man presents with a tender subcutaneous nodule on his hand that appeared after cleaning his aquarium. What is the most likely diagnosis?

REVIEW ...........................................................................................

Noninvasive tests for liver disease, fibrosis, and cirrhosis: Is liver biopsy obsolete?

The need for liver biopsy is diminishing, thanks to accurate blood tests and imaging studies.

E. Carey and W.D. Carey

CME REVIEW

How to prevent glucocorticoid-induced osteoporosis
When prescribing glucocorticoids for long-term treatment, physicians should take steps to prevent osteoporosis.
R.K. DORE

IM BOARD REVIEW

A young woman with a breast mass: What every internist should know
What is the differential diagnosis? What workup is appropriate? And what is the next step?
R. WESOLOWSKI AND G.T. BUDD

CME REVIEW

Coronary heart disease in people infected with HIV
Traditional risk factors are the main culprits, although the infection itself and antiviral therapy also contribute.
C.D. MALVESTUTTO AND J.A. ABERG

DEPARTMENTS

CME calendar
Directions for taking CME tests online
To receive CME credit, read any or all of the CME-certified articles in this issue (those that carry the CME logo), then go to www.ccjm.org to take the test for the article or articles you select. It should take up to 1 hour to complete the activity for each article.
Release date: August 1, 2010
Expiration date: July 31, 2011

UPCOMING FEATURES

■ Taking blood pressure: Too important to trust to humans?
■ Treating hyponatremia: When to go easy on the saline
■ Do statins cause diabetes?
■ Should anticoagulation be resumed after intracerebral hemorrhage?
■ Hepatitis C: Why and how to screen
■ Acute ST-elevation MI: Should thrombolytics be used before PCI?
■ Charcot neuroarthropathy: An overlooked complication of poorly controlled diabetes
■ Should antibiotics be given for aspiration pneumonia?
