From the Editor .......................................................... 234
Examine before ordering: An algorithm unchanged by new tests
I have always been irked when doctors reflexively order panels of immunologic tests when evaluating patients with “arthritis.”

B.F. Mandell

1-Minute Consult ......................................................... 249
Should I order an anti-CCP antibody test to diagnose rheumatoid arthritis?
This test is highly specific, though it may be redundant for a patient who has documented rheumatoid arthritis and who is seropositive for rheumatoid factor.

N. Bose and L.H. Calabrese

The Clinical Picture ................................................. 253
Purpuric lesion on the elbow
A 75-year-old man developed a painful lesion on the elbow several days after starting warfarin therapy. What is the most likely diagnosis?

N.K. Voore, A. Rahman, S. Sanna, and H. Bahrain

The Clinical Picture .................................................. 255
Purple urine in a woman with chronic kidney disease
Although purple urine itself is usually considered benign, it should prompt an evaluation for urinary tract infection.

Y.-C. Chen

Review ................................................................. 258
Synthetic legal intoxicating drugs: The ‘incense’ and ‘bath salt’ phenomenon
These products are gaining in popularity among drug abusers, because they are cheap and produce a powerful high. They may not be detectable on standard urine drug screening.

J. Jerry, G. Collins, and D. Streem

REVIEW ........................................................................................... 265
Factor V Leiden: How great is the risk of venous thromboembolism?
The risk of a first episode of thromboembolism is two to five times higher with the heterozygous factor V Leiden mutation, but the absolute risk is still low.

K. SHAHEEN, M.C. ALRAIES, A.H. ALRAIYES, AND R. CHRISTIE

REVIEW ........................................................................................... 273
Antireflux surgery in the proton pump inhibitor era
Although drug therapy with a proton pump inhibitor is the first-line treatment for gastroesophageal reflux disease, surgery still has several specific indications.

W.J. BULSIEWICZ AND R.D. MADANICK

THE CLINICAL PICTURE ...................................................................... 282
A nodule on a woman's face
It is firm, pink, 10 mm in diameter, with surrounding telangiectasias. What is it?

REVIEW ........................................................................................... 285
Nonallergic rhinitis: Common problem, chronic symptoms
Allergic and nonallergic rhinitis have similar symptoms, but their mechanisms and treatment differ.

B. SCHROER AND L.C. PIEN

DEPARTMENTS

Letters to the Editor
Readers comment on previous articles about glucocorticoid-induced diabetes and adrenal failure (November 2011), essential tremor (December 2011), and Parkinson disease (January 2012).

CME Calendar
Directions for taking CME tests online
To receive CME credit, read any or all of the CME-certified articles in this issue (those that carry the CME logo), then go to www.ccjm.org to take the test for the article or articles you select. It should take up to 1 hour to complete the activity for each article.

Release date: April 1, 2012
Expiration date: March 31, 2013
