## Table of Contents

### From the Editor

**The 'T' in ITP remains**

The "I" has changed its meaning and the "P" is not necessary to make the diagnosis, but the disease formerly known as idiopathic thrombocytopenic purpura (ITP) remains important to diagnose.

B.F. Mandell

### The Clinical Picture

**A woman with a swollen uvula**

A woman on patient-controlled analgesia with morphine suddenly develops shortness of breath because of uvular swelling obstructing the airway. What is the diagnosis?

S.A. Pande, K. Raghav, S. Mehta, G. Babbar, and S. Kandpal

**The apples and oranges of cost-effectiveness: A rejoinder**

A recent CCJM commentary used straw men to indict cost-effectiveness research.

C.I. Udeh and B.L. Udeh

**The conundrum of cost-effectiveness**

The author of the commentary replies.

V. Prasad

### IM Board Review

**Fever, dyspnea, and hepatitis in an Iraq veteran**

About 8 weeks after returning home, he presents with a cough, myalgia, headaches, fever, chills, drenching night sweats, and dyspnea on exertion. What is the most likely diagnosis?

R.L. Gutierrez and J.D. Hartzell

REVIEW

The role of aldosterone receptor antagonists in the management of heart failure: An update
Spironolactone (Aldactone) and eplerenone (Inspra) are now part of standard therapy. Still, they must be used cautiously, as they can cause hyperkalemia.

V. NAGARAJAN, M. CHAMSI-PASHA, AND W.H.W. TANG

REVIEW

Immune thrombocytopenia in adults: An update
Management has changed in the last decade, with new drugs and with increased awareness of treatment side effects.

S. THOTA, G. KISTANGARI, H. DAW, AND T. SPIRO

REVIEW

Using the ankle-brachial index to diagnose peripheral artery disease and assess cardiovascular risk
The authors seek to convince you to measure the ankle-brachial index in any patient you suspect may have peripheral artery disease, whether or not they have symptoms.

E.S.H. KIM, K. WATTANAKIT, AND H.L. GORNIK
