#### From the Editor

**A review of uncommon swelling**

Angioedema and the urticarias differ in their clinical manifestations and diagnostic and therapeutic implications.

_B.F. Mandell_

#### The Clinical Picture

**Not all joint pain is arthritis**

A 47-year-old man who was diagnosed with rheumatoid arthritis 5 years ago now has pleural effusions and abdominal pain.

_G.S. Kochhar, M. Rizk, and D.T. Patil_

**A young woman with enlarged lymph nodes**

A previously healthy 25-year-old woman presents with a “lump in the neck.” How should she be assessed?

_H. Husseinzadeh, C.V. Cotta, S. Gordon, and A. Lichtin_

#### IM Board Review

**A young woman with enlarged lymph nodes**

A previously healthy 25-year-old woman presents with a “lump in the neck.” How should she be assessed?

_H. Husseinzadeh, C.V. Cotta, S. Gordon, and A. Lichtin_

**Hyperpigmented patches on the neck, shoulder, and back**

A 17-year-old boy has had asymptomatic, unilateral hyperpigmented patches since birth. What is the diagnosis?

_J.M. Rizzo, L.C. Loss, and I.L. Rothman_
