CORRECTION

A typographical error appeared in **FIGURE 1** of: Park K, Bavry AA. Aspirin: its risks, benefits, and optimal use in preventing cardiovascular events (Cleve Clin J Med 2013; 80:318–326). The lower left side of the figure, discussing the use of aspirin for primary prevention in men, should read as follows:

Assess risk of myocardial infarction
(http://hp2010.nhlbihin.net/atpiii/calculator.asp);
give aspirin if:
Age 45–59 and 10-year risk ≥ 4%
Age 60–69 and 10-year risk ≥ 9%
Age 70–79 and 10-year risk ≥ 12%
