FROM THE EDITOR ................................................................................................................ 532
We have a greater understanding of ‘cardiac syndrome X,’ but questions remain
A better understanding of angina due to ischemia and no obstructive coronary artery disease has led to recognition of coronary microvascular dysfunction in many of these patients.
Brian F. Mandell, MD, PhD

THE CLINICAL PICTURE........................................................................................................ 536
Revisiting the ‘great masquerader’
An HIV patient presents with scaly brown lesions on the palms and soles, mildly painful oral erosions, and a buzzing sound in the right ear for the past 20 days.
Raihan Ashraf, MD; Rahul Mahajan, MD; Debajyoti Chatterjee, DM; Kollabathula Arpitha, MD

THE CLINICAL PICTURE........................................................................................................ 538
Chest pain: The importance of serial ECGs
Repeat electrocardiograms in a 44-year-old man who presented with severe hypertension revealed de Winter and Wellens patterns.
Rene Jansen van Rensburg, MBChB, MD; Jason Schutte, MBChB; Thomas de Beenhouwer, MD

EDITORIAL ........................................................................................................................... 541
Fungus among us: A poster child for diagnostic stewardship
When interpreting the significance of Aspergillus species in respiratory culture, first ask if the culture was clinically indicated, or if this was an incidental finding.
Sherif Beniameen Mossad, MD, FACP, FIDSA, FAST

1-MINUTE CONSULT .............................................................................................................. 543
Is Aspergillus isolated from respiratory cultures clinically significant?
Aspergillus is ubiquitous, so the significance of the finding depends on the patient’s symptoms, underlying lung condition, immune status, and radiologic findings.
Firas El-Baba, MD; Donovan Watza, PhD; Ayman O. Soubani, MD
