FROM THE EDITOR .......................................................... 644

A perspective on discussing COVID-19 vaccines: 644
Efficacy and adverse effects
Physicians should be vigilant and open-minded regarding possible adverse reactions to the vaccines, and should take time to discuss the demonstrated efficacy of vaccines with patients.
Brian F. Mandell, MD, PhD

THE CLINICAL PICTURE .................................................. 648
COVID-19 vaccine-induced cellulitis and myositis
The day after receiving the second dose of the mRNA vaccine, redness and pain developed at the injection site, eventually involving the whole left arm and shoulder.
Sathishkumar Ramalingam, MD; Harkesh Arora, MD; Susan Lewis, MD; Kulothungan Gunasekaran, MD; Maheswari Muruganandan, MD; Sivakumar Nagaraju, MD; Priyesh Padmanabhan, MD

THE CLINICAL PICTURE .................................................. 651
Metronidazole-induced encephalopathy: Symmetrical hyperintensity on imaging
The diagnosis should be based on a combination of the patient’s clinical history, laboratory findings, and imaging results.
Hiroki Matsuura, MD; Takashi Katayama, MD; Kentaro Deguchi, MD, PhD

THE CLINICAL PICTURE .................................................. 653
Exanthem and enanthem with fever and dyspnea
The patient presented with high fever, productive cough, dyspnea, generalized myalgias, conjunctivitis, and whitish elevations with an erythematous base on the buccal mucosa.
George D. Liatsos, MD, PhD; Emmanouil Koulias, MD

COMMENTARY ......................................................................................................................

Peyronie disease and erectile dysfunction:  661
A potential new paradigm
Viewing Peyronie disease as related to erectile dysfunction allows for the possibility of preventing the disease in patients with erectile insufficiency.
Drogo K. Montague, MD

GUIDELINES TO PRACTICE ....................................................................................................

Updated guidelines for immune thrombocytopenic purpura:  664
Expanded management options
The aim is to help practitioners decide on inpatient vs outpatient management, thresholds for initiating treatment, and options for second-line treatment in adults.
Sherwin DeSouza, MD; Dana Angelini, MD

REVIEW ..............................................................................................................................

Neuropsychiatric assessment and management of the ICU survivor 669
Post-intensive care syndrome occurs in 50% to 70% of ICU survivors. The authors examine various facets of this syndrome and emphasize the role of post-ICU recovery clinics.
Erin A. Dean, MD; Michelle Biehl, MD; Kathryn Bash, APRN, CNP; Jeremy Weleff, DO; Leopoldo Pozuelo, MD

REVIEW ..............................................................................................................................

Chronic venous outflow obstruction:  680
An important cause of chronic venous disease
A review of the key factors to consider in management of chronic venous outflow obstruction, and advice on how best to get patients the care they need.
Matthew Harris, MBBS, MRCS; Chung Sim Lim, MBBS, PhD, FRCS, FEBVS

REVIEW ..............................................................................................................................

Changing US trends in contraceptive choices 689
The history and the pros and cons of depot medroxyprogesterone acetate and long-acting reversible contraceptives are examined.
Suneela Vegunta, MD, FACP, NCMP; Aakriti R. Carrubba, MD; Megan N. Wasson, DO, FACOG
