## From the Editor

**Recognizing a retirement, and a calcium deposition syndrome** 197
Personnel changes at CCJM, and underrecognition of calcium deposition in the cervical spine.

Brian F. Mandell, MD, PhD

## The Clinical Picture

**Crowned dens syndrome:** 204
**Caution about asymptomatic calcification**
An 88-year-old man developed fever, headache, and posterior neck pain resistant to initial therapy.

Junki Mizumoto, MD

**Calcium pyrophosphate deposition and crowned dens syndrome** 206
Patients are typically over age 65, often with significant leukocytosis and dramatically elevated inflammatory markers.

Ann K. Rosenthal, MD

## The Clinical Picture

**Tumoral calcinosis** 208
A 47-year-old woman on peritoneal dialysis presented with dyspnea and hip pain.

Hiroyuki Yano, MD; Mitsuyo Kinjo, MD, MPH

**Puffy hand syndrome** 210
A 37-year-old man visited the rheumatology clinic for evaluation of swelling of his fingers and hands.

Soumya Chatterjee, MD, MS, FRCP

## 1-Minute Consult

**Is it safe to start steroids at home for a COPD exacerbation after virtual assessment in the COVID-19 era?** 213
Yes. Corticosteroids are beneficial, and virtual visits are appropriate, especially in this pandemic.

Achintya D. Singh, MBBS, MD; Agrima Mian, MD; James K. Stoller, MD, MS

INTERPRETING KEY TRIALS

Update in perioperative cardiac medicine 2021
New light on preoperative assessment and on the need for anticoagulation.
Steven L. Cohn, MD, MACP, SFHM

COMMENTARY

Our evolving understanding of primary aldosteronism
Current screening and confirmatory testing lack sensitivity and carry a poor negative predictive value.
Ali Mehdi, MD, MEd, FACP; Pratibha Rao, MD, MPH; George Thomas, MD

SYMPTOMS TO DIAGNOSIS

Pregnancy in a woman with congenitally corrected transposition of the great arteries
She presents with nausea and emesis 7 weeks after her last menstrual period.
Sarah A. Goldstein, MD; Lisa Sorenson, CNP; Jeffrey B. Chapa, MD; Richard A. Krasuski, MD

REVIEW

Update on medical management of acute hip fracture
Emphasis is on prompt surgery, multimodal analgesia, and enhanced recovery pathways.
Lily Ackermann, MD, ScM; Eric S. Schwenk, MD; Yair Lev, MD; Howard Weitz, MD
