FROM THE EDITOR

Circulating lipids are not all bad: An LDL mimic that may be only skin deep 422
Although lipoprotein-X separates out by density in the low-density lipoprotein (LDL) fraction and thus may appear as LDL in the laboratory report, it is biologically unique.
Brian F. Mandell, MD, PhD

THE CLINICAL PICTURE

Xanthomas: Differentiating atherogenic from nonatherogenic 429
The patient had tendinous xanthomas on the dorsal joints of the hand and eruptive xanthomas on the buttock, as well as xanthoma striatum palmare on the volar aspect of the hand.
Vy Mai, MD; Hossein Akhondi, MD

THE CLINICAL PICTURE

The double-tongue sign 435
Computed tomography showed enlarged mylohyoid and geniohyoid muscles, surrounding inflammatory findings, and small gas retentions.
Nami Yoshimura, MD; Takashi Watari, MD, MHS; MCTM, PhD; Keisuke Misao, MD; Toshihiro Imada, MD; Junji Mashino, MD

1-MINUTE CONSULT

Is exercise restriction necessary in patients with pericarditis? 437
The authors review current recommendations and illustrate possible approaches through a case scenario.
Felix Berglund, MD; Allan L. Klein, MD

1-MINUTE CONSULT

What are the considerations in patient selection and timing of risk-reducing mastectomy? 442
The option of risk-reducing mastectomy is for those at highest risk, and multidisciplinary conversations setting patient expectations are critical for optimal patient outcomes.
Holly J. Pederson, MD; Allison W. Kurian, MD, MSc; Zahraa Al Hilli, MD

Upcoming Features

- Atherosclerotic cardiovascular disease: Primary and secondary prevention
- Cirrhotic coagulopathy
- Reducing breast-cancer risk: The role of chemoprevention
Altered mental status in a man with metabolic syndrome

A 25-year-old man with bipolar I disorder, hypertension, posttraumatic stress disorder, and obesity was found unresponsive with shallow breathing and foaming at the mouth.

Bernie P. Wu, BS; Molly Wheeler, PharmD; Jennifer K. Hockings, PharmD, PhD; Andrew Coulter, MD; Leopoldo Pozuelo, MD

Do all patients with primary pulmonary coccidioidomycosis need antifungal therapy?

Patients diagnosed with this condition who have no symptoms or are mildly symptomatic do not require treatment and can be closely monitored.

Simran Gupta, MD; Nikita Ashcherkin, MD; Janis E. Blair, MD

The role of GLP-1 receptor agonists in managing type 2 diabetes

A review of the evidence regarding the benefits and adverse effects of GLP-1 receptor agonists in patients with type 2 diabetes mellitus or obesity.

Noura Nachawi, MD; Pratibha PR Rao, MD, MPH; Vinni Makin, MBBS, MD, FACE

Unilateral atrophic kidney in a 45-year-old woman

The patient presented with 2 days of constant, sharp, nonradiating flank pain on the right side, worse with movement and coughing, and severe enough to limit ambulation.

Mohammad A. Sohail, MD; John Sedor, MD; Lee Kirksey, MD, MBA; Steven C. Blaha, MD; Heather Hofmann, MD, FACP
