## From the Editor

**Circulating lipids are not all bad: An LDL mimic that may be only skin deep**

Although lipoprotein-X separates out by density in the low-density lipoprotein (LDL) fraction and thus may appear as LDL in the laboratory report, it is biologically unique.

Brian F. Mandell, MD, PhD

## The Clinical Picture

**Xanthomas: Differentiating atherogenic from nonatherogenic**

The patient had tendinous xanthomas on the dorsal joints of the hand and eruptive xanthomas on the buttock, as well as xanthoma striatum palmare on the volar aspect of the hand.

Vy Mai, MD; Hossein Akhondi, MD

**The double-tongue sign**

Computed tomography showed enlarged mylohyoid and geniohyoid muscles, surrounding inflammatory findings, and small gas retentions.

Nami Yoshimura, MD; Takashi Watari, MD, MHQ5, MCTM, PhD; Keisuke Misao, MD; Toshihiro Imada, MD; Junji Mashino, MD

## 1-Minute Consult

**Is exercise restriction necessary in patients with pericarditis?**

The authors review current recommendations and illustrate possible approaches through a case scenario.

Felix Berglund, MD; Allan L. Klein, MD

**What are the considerations in patient selection and timing of risk-reducing mastectomy?**

The option of risk-reducing mastectomy is for those at highest risk, and multidisciplinary conversations setting patient expectations are critical for optimal patient outcomes.

Holly J. Pederson, MD; Allison W. Kurian, MD, MSc; Zahraa Al Hilli, MD

## Upcoming Features

- Atherosclerotic cardiovascular disease: Primary and secondary prevention
- Cirrhotic coagulopathy
- Reducing breast-cancer risk: The role of chemoprevention
A 25-year-old man with bipolar I disorder, hypertension, posttraumatic stress disorder, and obesity was found unresponsive with shallow breathing and foaming at the mouth.

Bernie P. Wu, BS; Molly Wheeler, PharmD; Jennifer K. Hockings, PharmD, PhD; Andrew Coulter, MD; Leopoldo Pozuelo, MD

Do all patients with primary pulmonary coccidioidomycosis need antifungal therapy?

Patients diagnosed with this condition who have no symptoms or are mildly symptomatic do not require treatment and can be closely monitored.

Simran Gupta, MD; Nikita Ashcherkin, MD; Janis E. Blair, MD

The role of GLP-1 receptor agonists in managing type 2 diabetes

A review of the evidence regarding the benefits and adverse effects of GLP-1 receptor agonists in patients with type 2 diabetes mellitus or obesity.

Noura Nachawi, MD; Pratibha PR Rao, MD, MPH; Vinni Makin, MBBS, MD, FACE

The patient presented with 2 days of constant, sharp, nonradiating flank pain on the right side, worse with movement and coughing, and severe enough to limit ambulation.

Mohammad A. Sohail, MD; John Sedor, MD; Lee Kirksey, MD, MBA; Steven C. Blaha, MD; Heather Hofmann, MD, FACP
